Allowable Subject Matter

1. Claim 15 is allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record, neither anticipates nor renders obvious the following limitations as claimed:
[Claim 15]: An information recording device, comprising: a recorder which can record at least either image or audio information; a wireless communication device for transmitting said information to external equipment through wireless communication; a carrier generating section for generating a carrier for said wireless communication device; and a controller for controlling the generation and pause of said carrier, wherein said controller causes said carrier generating section to pause the generation of the carrier when the information recorder receives an instruction to capture an image, and the controller causes the carrier generating section, which is transmitting the at least image or audio information, to pause at least for a period from the time when said image or audio information is captured to the time when said image or audio information is recorded, and wherein the controller pauses only a carrier oscillation section of the carrier generating section while a clock oscillator of the carrier generating section is active" in combination with other claimed elements.

The prior art fails to teach a semi-stop state where only a receiving operation is valid and the generation of a carrier used for communication is stopped by stopping an oscillation operation of only the transmitting section 33 (See Page 6, lines 10-18 of the applicant's specification) while a clock oscillator section 32 is active (figure 1).
